Cave Proof Vault Line:

The "Cave Proof" is the most inexpensive vault we sell. This vault is constructed out of reinforced concrete. It is also available with a tapered lid for an additional cost. The tapered lid gives this vault a more refined look, while providing more strength more from the soil pressure.

Standard Vault Line: DISCONTINUED

The Standard Vault is a flat lid burial vault, coated with black asphalt paint and asphalt applied between the tongue and groove of the lid where the box is joined.

Deluxe Vault Line:

The Deluxe Vault has a tiered lid for more strength. The top is painted with black asphalt and has an option of a copper painted top. The box is coated with black asphalt paint and asphalt applied between the tongue and groove of the lid and box where joined.

Oxford Vault Line:

The Oxford Vault, provides a sense of security, it provides a unique reinforced vault design based on the strength and permanence of the structured arch. It has a vacuum formed polymer liner and is surrounded by concrete. The exterior of the vault is painted with asphalt paint and enhanced with a painted copper top. A special bonding process adheres the liner to the concrete. The tongue and groove design is in combination with Trigard's butyl tape provides an immediate and secure seal. Vault is pictured with a name plate and decorative wreath accessory, both can purchased separately.

Heritage Vault Line:

The Heritage Vault is Everlasting Durability. It is a unique reinforced vault design based on the strength and permanence of the structured arch. The thermoformed polymer liner is surrounded by concrete. The exterior of the vault is enhanced by a painted gold finish and gold handles on the lid. A special bonding process adheres the liner to the concrete. The tongue and groove design in combination with Trigard's butyl tape provides an immediate and secure seal. Vault is pictured with a name plate and decorative wreath accessory, both can be purchased separately.

Tremont Vault Line:

The Tremont Vault is value combined with classic looks. This is a reinforced vault design based on the strength and permanence of the structured arch. A heavy polymer liner is surrounded by sturdy, reinforced concrete. The exterior of the vault is enhanced by a high quality finish. A special bonding process adheres the liner to the concrete. The tongue and groove design in combination with Trigard's butyl tape provides an immediate and secure seal. The classic simulated marble liner, beautifully accents the Tremont vault and a wide range of casket colors. This vault features a raised church window design.

Aegean Vault Line:

The Aegean Vault is a unique addition to the burial vault industry. The Aegean series offers three layers of protection that add stability and reinforcement throughout the entire line. Faux finished polymers surround a concrete core to offer the ultimate in strength and protection. Intricate moldings and decorative corner columns complete the look of refined marble. The interior of each Aegean series vault is thermoformed polymer lined unit that matches the exterior of the vault. When you combine personal service Trigard's standard of excellence, you will discover the Aegean series truly delivers the quality customers deserve and respect.

Caroline Vault Line:

The Caroline Burial Vault adds the Feminine Touch, the interior is enhanced by hand-crafted stainless steel inlays, its bonded to a polymer layer. The liner is secured to sturdy, reinforced concrete while the exterior is complemented by a superior quality finish. A unique reinforced vault design based on the strength and permanence of the structured arch. The tongue and groove design in combination with Trigard's butyl tape provides an immediate and secure seal.

Steel Vault Line:

Information and pricing for steel vaults is available upon request. Due to these being rarely used, we do not keep this line on stock.

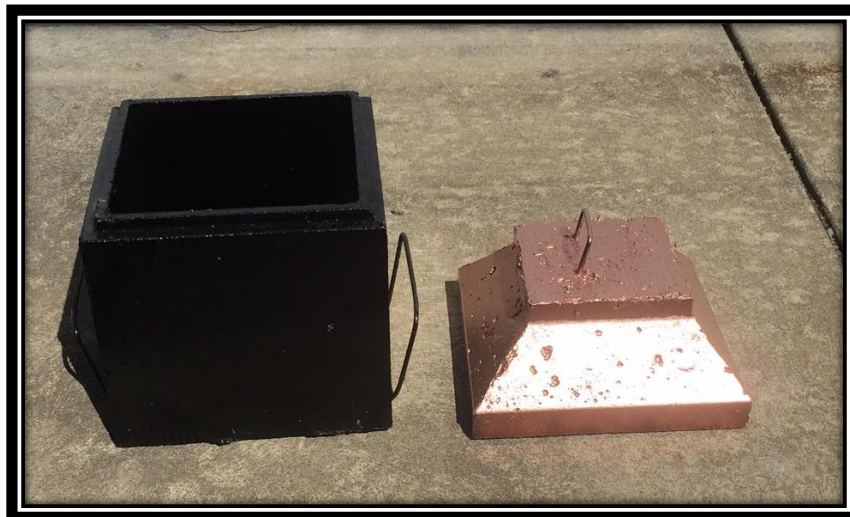

Vault Accessories:

Vault accessories and name plates can add a personal touch to a loved ones vault. These decorative crosses and wreaths are available painted in a silver or copper color. Custom colors are available upon request. The accessory is attached to the lid of the vault.

*Custom colors are subject to an added cost.

Concrete Urn Vaults:

The concrete urn vault is a great option when planning on burying a loved ones remains. It is enhanced with a painted copper top and the tapered top provides extra strength. The tongue and groove design combined with an asphalt seal provides protection from water and soil entering the vault. The urn vault also provides space for personal items and keepsakes.

Poly Lined Concrete Urn Vault:

The poly lined urn vaults offer the same strength and durability from the concrete shell as the concrete urn vaults do, but with an added layer of protection provided by the poly liner. The poly liner is available in two color options, the standard brown and a white marble. The tongue and groove design combined with an asphalt seal provides protection from water and soil entering the vault. The urn vault also provides space for personal items and keepsakes.

Headstone Services:

Having a proper foundation under a headstone is crucial to preventing the stone from settling. The freeze/ thaw seasons we have in Pennsylvania allow the ground to push and heave quite often. LSM Landscaping will dig the foundation to the proper depth, form and pour the structure. Foundation dimensions are poured .25" wider and .25" longer to provide adequate room for setting the headstone on.

Requirements:

Please provide a paper detailing the headstone specifications:

- Cemetery name and location
- Funeral home name
- Name on headstone
- Base dimensions of headstone
- Location of headstone (I will provide flags for marking the proper grave lot)
- Names on headstones directly next to proposed foundation (in case flag would be moved)
- Please write the following information on the provided flag:
 - Funeral home name
 - Name on headstone
 - Base dimensions of headstone

Resetting- POR (Price on Request)

Burial Site Comparison:

Above is a picture of a grave site that was opened and closed by LSM Landscaping. During the opening process, the topsoil is saved and the majority of burden soil is hauled away. Closing the grave, the backfill soil is compacted in lifts to ensure little to no settling. The topsoil is then placed; followed by: seed, fertilizer, and straw. This process provides a clean finished look and saves the cemetery a lot of extra work.

Burial Site Comparison:

Pictured above are two burial sites that were not done by LSM Landscaping. Very little time was spent making the site presentable to family, which typically visits the grave site shortly after interment. This type of site also makes the cemetery caretaker's job harder.
